

D4D Technologies Announces New Vice President

Dallas, TX – (February 21, 2007) – D4D Technologies is pleased to announce the addition of Dr. Gary Severance as vice president of marketing and clinical affairs, effective February 22, 2007.

Dr. Severance's responsibilities will include leading the company's market entry into the chairside CAD/CAM field and expanding the opportunities clinicians and laboratories have in providing functional and esthetic restorations more efficiently. In addition, as vice president of clinical affairs, Dr. Severance will direct the clinical testing and evaluations of the E4D Dentist System and participate in E4D University educational programs. Dr. Severance will also coordinate communication to and within the profession regarding this exciting new technology.

"Dr. Severance's range and depth of experience in the technology, marketing, and professional service aspects of dentistry are truly exceptional and provide additional expertise to ensure a successful launch of the E4D Dentist System this year," said Basil Haymann, chief executive officer and chairman of the board of D4D Technologies.

Before joining D4D, Dr. Severance worked with Ivoclar Vivadent (Amherst, NY) for over 18 years in various roles including Director of Marketing, Education and Professional Services. Dr. Severance has also worked with Implant Innovations, Inc. of West Palm Beach, FL. Dr. Severance is a 1987 graduate of the University of Minnesota School of Dentistry.

About D4D Technologies LLC.

D4D Technologies is poised to take the dental restoration market to a higher level of productivity, patient comfort, and convenience with its E4D CAD/CAM restorative system for dental offices and laboratories. The system uses high-speed laser scanning technology to produce digital 3D impressions of teeth prepared for full contour crowns, inlays, onlays, or veneers without reflective agents, such as powder, required by other CAD/CAM systems. The intuitive DentaLogic™ software enables operators to customize restoration designs and send them wirelessly to the heavy-duty mill which uses the latest materials to produce fine esthetic restorations. Highly accurate, versatile, and easy to use, the E4D system provides significant productivity improvements over the traditional approach to creating dental restorations: for dental offices, quick one-visit restorations mean greater numbers of satisfied patients, while laboratories can significantly reduce manual labor.

Headquartered in Richardson, TX, the company has entered into agreements with three major corporations in the dental industry: Henry Schein will handle sales and distribution; 3M and Ivoclar Vivadent will supply restorative materials.
